

Puget Sound Landscaping Soil Testing Service

In Partnership with the Thurston Conservation District

While we strive to provide the highest quality products to our clients, we sometimes need to know in greater detail what we need to do to an existing soil to make it closer to perfect for the given application.

A soil test can supply specific information to accomplish that!

We offer a variety of levels of service depending on our prior involvement on the project – see below.

Soils Test – Stand Alone Full Service	\$275
Site visit, soils sampling and submission, explanation of results and recommendations.	
Soils Test – Consultation Add-on	\$225
Add-on to a scheduled consultation, soils sampling and submission, explanation of results and recommendations.	
Soils Test – Construction	\$100
As part of a construction project we sample the soil and submit the sample, explain results and provide recommendations.	

We run our soil tests through the Thurston Conservation District. For more information on their services, please click here:
